Distribution Functions

Part I – Statistics Foundation for ML

Omid Safarzadeh

Status: STUB

This chapter has not been fully authored yet. It is scaffolded so the folder/file layout matches every other chapter in the repo. See `README.md` in this folder for how to contribute a full chapter.

Source slide deck: ***source_slides/STAT4ML_Slide_3__Distributions.pdf*** *(preserved unmodified from the original repository).*

Planned topics

- Discrete distributions: uniform, binomial, Poisson
- Continuous distributions: uniform, exponential, normal, lognormal, Laplace, beta

TODO

- Expand each topic above into full prose sections with worked examples.
- Add figures under `figures/`.
- Fill in `exercises/python`, `exercises/r`, `exercises/rust` (plain exercise, Rustlings-style buggy exercise, and solution) per the pattern in Chapter 1/2 of Part I.
